Clewbert quick guide

A brainstorming partner you talk to, with an agent team behind you.

1. Bring in anything

- Paste screenshots and links, drop PDFs, documents, videos and any other file.
- Clewbert reads it all, including the words inside pictures and PDFs.

2. Talk to it

- Click the microphone and ask out loud: "What is on this board?"
- Say "show me" or "go into" a frame, and the board moves there.
- Answers come only from your boards. The items used light up.

3. Hand work to your team

- Press A, say what you need, and press Start.
- The Lead splits the work, teammates research, read, write and build demos.
- Their questions show up on the board. They ask before sending or buying anything.

4. Keep it private

- Your boards are plain files on the computer that runs Clewbert.
- Pick the model for each job in Settings, including models on your own machine.
- Clewbert can also hear and speak with its own free voice, inside your browser.
